ABSTRACT

In response to a 1982 directive by the Florida Legislature, the State Department of Education conducted a comprehensive study of financial assistance programs available to the state's postsecondary education students. The study sought to establish goals for student aid programs which would promote maximum effectiveness of state funding; to determine the extent to which existing programs meet student financial needs and postsecondary costs; and to identify alternative ways through which existing programs and resources could meet the needs of students, their families, and educational institutions. The study design involved a description of the state postsecondary system and its future needs; a historic profile of financial aid; applicants and the type and amount of awards granted; an examination of aid programs available; a description of an ideal or desired aid policy; and the identification of possible changes in the existing system. An examination of student and college records, a survey of high school seniors, and interviews with college personnel and students led to 24 recommendations, including that: (1) the existing statutory aid policy should be maintained with modifications; (2) a minimum grade point average of 2.0 should be required for financial aid; and (3) community colleges. should be permitted to levy an additional student fee for financial aid purposes. Data on sources of aid, recipient characteristics, student costs, aid awards, sector enrollments and national comparisons, and funding options simulations are appended. (HB)

Executive Summary

The 1982 Legislature directed the Department of Education to conduct a study of student financial assistance programs in Florida. The findings and recommendations resulting from the study are to be used by the Legislature in developing a comprehensive statewide financial aid policy.

Throughout the conduct of the study many persons at both the State and institutional levels were invited to provide technical and advisory assistance. Although the study focused on State aid programs, attention was also given to Federal and institutional aid and the manner in which all grant, loan, and work resources are combined to assist individual recipients. The overall thrust of the study was the identification of priorities for State aid which will provide for the most effective use of the funds available.

The current enunciation of State financial aid policy, contained in Section 240.437, Florida Statutes, states "the objectives of the State program shall be the maintenance of a State financial aid program to supplement the basic national program which will provide equal access to post high school education to Florida citizens who have the ability and motivation to benefit from post high school education." The study concluded that the State's statutory policy objectives remain essentially as sound today as when first adopted in 1970. The study emphasized that the most critical objective from the standpoint of sound financial aid policy is that student aid be provided on the basis of demonstrated financial need. However it was observed that much of the growth in student aid funding in Florida in recent years has occurred in non-need based programs.

In suggesting procedural and programmatic changes to the current State aid framework, the study presents 24 recommendations in 16 general areas. The intended outcomes of these policy options are:

- To distribute available aid primarily on the basis of financial need, giving priority to those individuals with the greatest "absolute" need.
- To recognize the critical role played by student self-help activities such as work and loans in financing postsecondary education and to provide opportunities in these areas.
- To focus greater attention on the academic performance of financial aid applicants.
- To extend aid to all levels of postsecondary education including vocational education in the public and independent sectors.
- To better coordinate State aid with both Federal and institutional aid resources.

- To provide a financial aid mechanism for addressing severe shortages of skilled personnel in areas specifically identified by the State, for example math and science teachers.
- To strengthen and continue the administration of State financial aid programs by a central State agency.

Finally, a major outcome of the study is the initiation of the development of a computer simulation model to assess the impact of various policy decisions relating to State aid programs - method of determining need, level of appropriations, tuition charges, award amounts - in the distribution of aid to individual students, institutions and sectors. This model will be available for current and future planning by the Department, the State Board of Education, and the Legislature.

The specific recommendations of the study are:

State Student Financial Aid Policy

1. The statute which framed the policy objectives for the state student financial aid program essentially remains as sound as when it was first adopted. The existing policy should be reconfirmed with several modifications.

State Grant Programs

- 2. Students should be required to apply for Pell Grants when they apply for State grants and the Pell awards should be considered in any assessment of students' available resources.
- 3. The Florida Student Assistance Grants (FSAG) should be maintained with priority for fund distribution to applicants with the greatest absolute need based on their total family resources.
- 4. The Tuition Voucher Program should be converted to a need-based grant program for students attending eligible independent colleges and universities in Florida.
- 5. The Academic Scholars Program should be allowed to complete its first year of implementation under the procedures and criteria enacted by the 1982 Legislature before evaluating its effectiveness and recommending any further modifications.

Work Study Program

- 6. The College Career Work Experience Program should complete its first year of implementation prior to an evaluation of its effectiveness.
- 7. A portion of the OPS (Other Personnel Services) Funds available at public postsecondary institutions should be directed to students with demonstrated financial need.

Standards of Academic Eligiblity

- 8. A minimum grade-point average of 2.0 or "6" should be required of aid applicants for both initial receipt and renewal of FSAG, Tuition Voucher and State work experience program awards.
- 9. Beginning in 1984-85, those colleges and universities which offer Associate of Arts or Bachelor Degree programs should be required to administer the College Level Academic Skills Test (CLAST) in order for their students to be eligible for participation in State financial aid programs.

Independent Student Status

10. Classification of State aid applicants as independent should generally be limited to those students who are 22 years of age or older.

Gradate Students

11. While priority for State aid funds should continue to be placed on serving undergraduate students, options for providing additional support for graduate students should be considered.

Part-Time Students

12. Need-based State aid programs should continue to be limited to full-time students. Financial assistance for part-time students should be provided through Federal, institutional, and other resources.

Cemmunity Colleges

13. Each community college should be authorized to levy an additional student fee of up to \$1.00 or more per credit hour or credit hour equivalent, to be used solely for financial aid purposes, the maximum amount to be established and subsequently modified as required by the State Board of Education.

State University System

14. Consideration should be given to the consolidation and increase of the two student fees - General Student Aid and Student Financial Aid - currently being assessed in the universities and application of the same statewide criteria for use of these fees as suggested for the proposed community college fee.

Vocational Education -

15. The Division of Vocational Education should cooperate with FSFAC and other appropriate entities in the development of an in-service training program to increase the participation of

district operated vocational-technical centers in Federal aid programs for which they are eligible.

16. By 1984-85, institutions in the public vocational sector should be included in need-based State grants if they are eligible to participate in the Pell Grant or Guaranteed Student Loan (GSL) Programs, and if they are complying with all applicable laws and rules including the charging of fees within the range established by the State Board of Education.

Independent Business and Trade Schools

17. By 1984-85, licensed, accredited independent business and trade schools should be included in the Florida Student Assistance Grant Program if they are eligible to participate in the Pell Grant or Guaranteed Student Loan Programs.

Aid to Meet Critical Labor Market Needs

18. The Teacher Scholarship Program currently included in the 1983-85 budget request of the Department of Education should receive full consideration and support. In addition, the State should establish a Loan Forgiveness Fund for Florida students trained in fields where serious personnel shortages exist such as Math and Science Education, who obtain in-state employment in these areas of specialization.

Student Loans

19. Standby authority should be established for the issuance of Student Loan Revenue Bonds to permit Florida to serve as a secondary market or direct lender in the event that a significant limitation on availability of low interest student loans occurs either in general or for specific types of students such as those pursuing graduate or vocational studies.

Program Management

- 20. As a means of strengthening the administration of financial aid programs by a central State agency, the Legislature and the Department of Education should take the necessary steps to implement the recommendations contained in the 1982 Performance Audit of the Florida Student Financial Assistance Commission conducted by the Auditor General.
- 21. The Department of Education should annually review and validate a random sample of State grant award recipient records to determine the accuracy of the eligibility information provided.
- 22. Consideration should be given to the more complete use of available Federal revenues for the enhancement of the administration of the Florida Guaranteed Student Loan Program.

Student Financial Aid Data Base

23. The Department of Education should institute the necessary steps to develop and periodically update an inventory of all sources of financial aid received by postsecondary students in Florida.

Student Financial Aid Statutory Revision

24. Consideration of Student Financial Aid issues by the 1983 Florida Legislature should include a thorough review and revision of the Florida Statutes (Chapter 240, Part IV) on Scholarship and Financial Aid.

Introduction

In response to a directive by the 1982 Legislature (Item 248D, Chapter 82-215, Laws of Florida) the Department of Education conducted a comprehensive study of student financial assistance programs available to postsecondary education students in Florida. State policy in this area was examined with particular attention given to the following objectives:

- (1) The need to establish goals for the State's student aid programs and methods for setting priorities of these goals so that the State's programs, in tandem with Federal programs, will promote maximum effectiveness of State funding.
- (2) The determination of how, and to what extent, existing Federal, State, and institutional aid programs work together to meet student financial need and postsecondary costs.
- (3) The identification of alternative ways through which existing programs and available resources can best serve the needs of students and their families, and institutions and the State.

To assist in conducting the study, the Department enlisted the support and guidance of representatives of the Office of the Governor, the Legislature, public and independent postsecondary institutions, the Postsecondary Education Planning Commission, the Florida Student Financial Assistance Commission, the Student Financial Aid Advisory Council, student financial aid directors, students, a team of independent consultants, and other knowledgeable

individuals. A list of these resource persons is included as Appendix A of this report.

The design for the study involved five phases:

- 1. Describe Florida Postsecondary Education in the 1980s and project the kinds of educational services needed in the State over the next 10 to 15 years.
- 2. Compile historic and current profiles on individual aid applicants and postsecondary institutions including the types and amounts of student aid distributed.
- 3. Profile the financial aid programs available in Florida with regard to such aspects as their objectives, eligibility criteria and source of funding.
 - 4. Describe an ideal or desired financial aid policy for Florida.
- 5. Identify modifications in Florida's student financial aid programs and procedures which are required to implement the State policy determined in Phase 4.

The first phase of the study was completed in July, 1982, and resulted in a document based primarily on information collected by the Postsecondary Education Planning Commission in the development of its Master Plan for Florida Postsecondary Education. Other references included the Master Plans being formulated by the Board of Regents and Community College Coordinating Poard. The Phase 1 Report contains summary data on the demographic composition of the State's population, current postsecondary education delawery systems, enrollment and attendance patterns and emerging trends and educational needs.

Phases 2 and 3 of the study were conducted concurrently and involved the collection and review of detailed information on the major student financial aid programs and resources in Florida. Attention was focused on 1981-82 as the most recent year for which data were available. In addition, historical information on the distribution of state and federal aid over the past six years was compiled. This period of time was selected to permit a comparison of funding levels both before and after enactment of the federal Middle Income Student Assistance Act of 1978. During this phase consideration was also given to aid initiatives being developed or proposed in other states. In order to accomplish its objectives this portion of the study required a significant amount of computer programming and data analysis in three areas:

- 1. Development of an unduplicated Master File from the...
 Student Financial Assistance Commission records of all applicants (over 116,000) for state administered aid programs student assistance grants, vouchers, academic scholars and guaranteed student loans.
- 2. Development and distribution of a survey of sample individual student records from this applicant pool to determine the typical patterns and combinations of aid which occur.
- 3. Development and distribution of an institutional survey to compile profile information particularly with regard to the amount and types of aid resources available at the institutional level.

These activities could not have been accomplished without the excellent cooperation and support of the Student Financial

Assistance Commission as well as the aid administrators, registrars, admissions officers, and other institutional personnel who participated. Appendix B contains selected data tables developed or reviewed during this phase. More complete information on this portion of the study is found in a Background Paper dated November 1, 1982.

Study staff also cooperated with representatives of the Board of Regents in the development of a survey of high school seniors. The survey, which is scheduled to be conducted during the Spring Semester in 1983, is designed to obtain information on the academic preparation of these students as well as their future academic and career interests and financial aid needs. The results of this effort should be available for consideration by the 1983-Legislature.

The Department of Education contracted with three independent consultants - Mr. William Clohah, Dr. Jerry Davis, and Dr. Sam Kipp - to 'assist with the development of an ideal or desired aid policy for Florida. Brief descriptions of the qualifications of these individuals are found in Appendix C. The consultants were asked to review Florida's current aid policy and programs, alternative policy options, and provide their professional judgment as to the most appropriate course of action for the State to pursue. Following a preliminary examination of Florida statutes and rules and the information gathered during the first three phases consultants conducted on-site interviews project, the representatives of all significant entities involved in the study. This process resulted in the creation of a discussion paper which was widely circulated to members of the Study Advisory Committee and others for review and comment in November of this year. A follow-up

also distributed

which provided an

to this initial, paper was

analysis and simulations of the specific impact of the major policy options proposed by the consultants. A major outcome of the study will be the in-house capability of the pepartment to continue producing such simulations based on the most current applicant data available.

A meeting of the Advisory Committee, two of the consultants and the study coordinators was held in Tallahassee on December 21, 1982. The primary purpose of the meeting was to permit input from all interested parties in the development of the final report for the study.

recommendations enunciated and explained on the following pages suggest policies and procedure's to address key identified through the entire study process. Several of the policy proposals, particularly those relating to the voucher and all consensus not represent the programs, They are, however, in the opinion representatives. consultants and the majority of those involved in the study, the . appropriate steps needed to place Florida's programs and policies in a position to respond to student financial aid needs in the coming ' years.

STUDENT FINANCIAL AID STUDY POLICY RECOMMENDATIONS

State Student Financial Aid Policy

1. The statute which framed the policy objectives for the state student financial aid program essentially remains as sound as when it was first adopted. This existing policy should be reconfirmed with several modifications.

Although the current statutory policy is now more than 12 years old the basic guidelines it provides remain relevant in the current financial aid climate with few exceptions. The following modifications to Section 240.437(2) are suggested:

"The objective of the state program shall be the maintenance of a state financial aid program to supplement the basic national program and other available resources which will provide equal access to postsecondary post-high-school education to Florida citizens who have the ability and motivation to benefit from such post-high-school education. In the development of a state program to achieve this objective it shall be policy that:

- (a) Student financial aid be provided <u>primarily</u> on the basis of financial need;
- (b) Students receiving need-based financial aid be expected to contribute toward their cost of education through self-help resources such as savings, work, and loans.

- (c -b-) Admission to institutions, and demonstrated performance be the criteria for eligibility for financial aid;
- (d.-c) Student financial aid be available to Florida residents for attendance at accredited postsecondary education institutions of--higher-oducation in Florida, public or private;
- (e-d) Student financial aid be provided for all levels of postsecondary high-seheel ed tion; and .
- (f -e) State student firmal al aid be administered by a central state agency."

Each of these changes reflect specific recommendations on the following pages. While all of these statutory objectives are important, the most critical one from the standpoint of sound. financial aid policy is that student aid be provided on the basis of demonstrated financial need. Making the state program "primarily" need-based permits the creation and continuation of programs which recognize outstanding academic achievement or which are used to attract individuals into training fields where critical labor market . shortages exist. Establishment of some consistent minimum standards of "demonstrated performance" as a condition for eligibility will reinforce the goal that state aid be directed to those with the ability to benefit from further education. Reference to "self-help" \ is added in recognition of the critical and growing role this source of support will continue to play in light of fiscal limitations at . Use of the term "postsecondary" rather than "higher levels. education" underscores the objective that State aid be available for all levels of education beyond high school.

State Grant Programs

2. Students should be required to apply for Pell Grants when they apply for State grants and the Pell awards should be considered in any assessment of students' available resources.

This practice will ensure that Pell Grants, the largest single source of need-Based grant aid for Florida Students - \$84 million in 1981-82 - will be fully employed by eligible applicants before supplementing these Federal funds with State aid. The aid application processes currently employed by Florida institutions make it possible for students to apply for Pell Grants at no additional cost, effort, or inconvenience. This policy should contribute to the more effective coordination of State and Federal aid resources.

3. The Florida Student Assistance Grants (FSAG) should be maintained with priority for fund distribution to applicants with the greatest absolute need based on their total family resources.

Under current FSAG procedures, students are ranked according to financial need from greatest to least need. Awards are distributed of FSAG applicants until all funds are exhausted. "Financial need" is defined in this process as the difference a family's ability to pay. Simply between educational costs and put, the formula for financial need is: Educational Oast - Family As cost increases, financial need Contribution = Financial Need. increases. As financial ability to pay at a given institution increases, financial need decreases.

Because college costs are greater at most independent colleges, FSAG applicants from middle and upper income families who attend these institutions frequently demonstrate greater relative financial need (the difference between cost and ability to pay) than

applicants from lower income families who attend lower cost schools in the public sector. Therefore, in the current FSAG award procedure and with existing funding levels many lower income students are denied grants because funds are exhausted before their rank on the list is reached.

the ranking procedure is changed to one in which students with the greatest absolute need, that is, the least ability to pay college costs, regardless of what these costs might be, were given highest priority in the distribution of FSAG awards, then more lower income students will receive more aid from this source in all sectors. It is recommended that FSAG applicants be ranked for award purposes according to total available resources from the parents, , students, and Pell Grant awards. This procedure will result in more funds flowing to lower income students who have the least family financial resources to gain access to any postsecondary institution. This procedure will also take into account Pell Grants Which are targeted to lower income students and permit these two State Federal resources to better complement and supplement each other. Finally, this approach will be more sensitive to meeting the increasing financial needs of lower income students at public colleges and universities as their tuitions increase in response to the State's need to meet the rising cost of providing quality education in the public sector.

Table 1 in Appendix D illustrates the 1981-82 distribution and projected awards based on level funding for a four-year transition period during, which applicants eligible under the present program would be allowed to renew their grants. No increase in funds is included.

Table 2 in Appendix D is a similar display which assumes a 10% increase in available funds each year. This percentage represents the national average growth for State need-based grant programs over the past two years according to the 1982 Survey of the National Association of State Scholarship and Grant Programs.

For both of these tables it is assumed that maximum grants would continue to be \$1,200, tuition and fees or financial need, whichever is lowest.

4. The Tuition Voucher Program should be converted to a need-based grant program for students attending eligible independent colleges and understities in Florida.

Three major reasons for the creation of the Tuition Voucher Program were its potential contribution to:

- the maintenance of a strong dual system of postsecondary, education in Florida;
- the provision of choice for students interested in pursuing their education in an independent Florida institution; and
- the potential savings to the State for every student who elected to attend an independent rather than public institution.

Awarding vouchers to higher income students without demonstrated financial need has limited effectiveness in terms of meeting these three purposes. In 1981-82, approximately 36% of the voucher applicants applied for no other form of State-administered financial aid including Guaranteed Student Loans. This proposal would improve the effectiveness of the program by distributing funds only to those students with demonstrated financial need. In order for the awards to keep pace with tuition and inflationary increases it is suggested that the maximum grant amount be indexed to growth in State general

revenue appropriations for public community colleges and universities. Under this approach, the Tuition Voucher Program would provide another form of tuition equalization grant assistance in coordination with the FSAG awards. In this regard, consideration should also be given to extending eligibility for the voucher funds to all degree granting independent colleges and universities participating in the FSAG program. The addition of a financial needs test will emphasize the student aid aspect of the voucher rather than institutional support and will reduce the rationale for the exclusion of the 21 institutions now limited to the FSAG. Rather than a flat grant, it is suggested that variable awards within an initial range of \$500 to \$1,000 be authorized.

Table 3 in Appendix D illustrates the distribution of the voucher funds for 81-82 and over the next four years assuming level funding and a grandfather classe for our rent recipients as well as the addition of all FSAG eligible independent institutions.

Table 4 covers the same period and incorporates an annual 5% increase in the voucher award levels.

During the course of the study consideration was given to the benefits of merging the Voucher and FSAG programs into a action would simplify the This need-based grant program. administration and coordination of these resources. But there is considerable value in maintaining a separate, identifiable program demonstrates . the State's commitment postsecondary education. The question of whether these two programs should be merged or remain distinct is secondary to insuring that funds are used as effectively as possible to promote student State access to postsecondary education in all sectors.

5. The Academic Scholars Program should be allowed to complete its first year of implementation under the procedures and criteria enacted by the 1982 Legislature before evaluating its effectiveness and recommending any further modifications.

This program, designed to retain Florida's academically talented year it was authorized students, was not implemented the first went through major statutory changes this past (1980).Legislative session (1982). During the current school year, almost 6ne-third (\$500,000) of the appropriated funds for the program are being returned to the State Treasury due to a drop in the number of history has made an evaluation of the program's effectiveness extremely difficult to perform. Research conducted in Florida, Pennsylvania, and elsewhere has indicated that financial aid is not the primary factor in determining where high achievers choose to pursue their studies. Other factors such as the perceived differences in the quality of institutions offerings have a greater impact on the brightest students' college choices.

It was suggested that the Academic Scholars awards be limited to students with demonstrated financial need. However, it was recognized that the awards were not intended primarily to serve as financial aid but to highlight the State's commitment to its best and brightest students.

Rather than propose this or other changes to the program at this point, such as limiting the number of awards and increasing their individual value, it is recommended that the program be allowed to complete a full year of implementation under the criteria and procedures enacted by the 1982 Legislature. In the interim, comparative data should be obtained from the independent sector and

community colleges (it is already being collected by the Foard of Regents) on the rate at which Florida resident National Merit and Achievement Scholars have remained in-state for their education during the years preceding and following enactment of the Academic Scholars Program.

Work Study Program 🗻

6. The College Career Work Experience Program should complete its first year of implementation prior to an evaluation of its effectiveness.

states are currently exploring the work-study concept, Several which has excellent potential for improving cooperation between the emploment sectors while providing students with educational and valuable e lence for career selection and training. Under the Florida program, created by the 1982 Legislature, postsecondary students obtain part-time employment in jobs related The State appropriation of \$2 million for the program in 1982-83 is to be matched equally be employers who time involved in attracting matching Due the to participate. funding and developing rules and procedures, this program is not yet fully implemented. An evaluation of the program's effectiveness would be premature at this time. Close monitoring will be required the remainder of the first year to determine what, if any, changes may be required.

7. A portion of the OPS (Other Personnel Services) Funds available at public postsecondary institutions should be directed to students with demonstrated financial need.

In response to the institutional survey conducted as part of the study, public community colleges and universities reported paying over \$10 million in 1981-82 to students in OPS (temporary or part-

time) positions. It is recommended that a portion (60%) of these OPS funds be directed to those students with demonstrated financial need. This policy would improve the coordination of available financial resources from other programs on individual campuses where this can most effectively take place and, at the same time help to complement the State aid programs. A phased-in schedule for implementation over three years - 20%, 40%, 60% - is recommended. Independent institutions should also explore the merits of this approach.

It was suggested that consideration be given to earmarking a portion of each State agency's OPS funds student positions. for However, establishing a set percentage all agencies would for enforce. probably be difficult to administer 'For example, and currently 95 of the 126 OPS positions (75.4%) in the Department of Education are held by students. Whether it would be feasible or appropriate for other agencies to match this level is questionable. As an alternative to setting specific numerical goals, the most promising course of action at present appears to be increasing awareness of the College Career Work Experience Program incentive for both public and private employers to hire students.

Standards of Academic Eligibility

8. A minimum grade-point average of 2.0 or "C" should be required of aid applicants for both initial receipt and renewal of FSAG, Tuition Voucher, and State work experience program awards.

At present, admission to an approved institution is the primary criterion for determining academic eligibility for the major State aid programs. Renewal of voucher and career work experience awards is permitted for students meeting institutional standards of

progress. FSAG renewals require at least a 2.0 grade point average for the previous academic year. Under these standards it possible for a student to continue receiving a tuition voucher while failing to renew a student assistance grant. If financial to consistently reinforce the State goals of access resources are and quality, uniformity in the academic minimum established for these programs is appropriate. Initial State aid awards should require evidence of a minimum 2.0 or "C" grade point average for the applicants' previous academic work. Data compiled by the College Board on 35,949 1981-82 college bound seniors in Florida indicated that less than 3% of these students had high school grade point averages below 2.0. State aid applicants below this level would remain eligible for Pell grants, Guaranteed Student Loans and other forms of Federal and institutional aid, so access would not be unduly restricted by this policy. However, the State's commitment to the importance of adequate preparation for college level work would be reinforced by this action. Affected students should be able to be considered for State grant and work programs upon satisfactory completion of one semester of full-time college enrollment. In recognition of the difficulty in using high school grades to determine the potential of older returning students, this minimum G.P.A. should not be imposed on applicants who have been out of school for more than five years. Renewal awards should require a student to have earned a 2.0 average for at least 24 semester credit hours or the equivalent during the preceding academic year. Programs designed to recognize outstanding academic achievement, such as the Academia Scholars awards, should be the only exception to this policy.

9. Beginning in 1984-85, those colleges and universities which offer Associate of Arts or Bachelor Degree programs should be required to administer the College Level Academic Skills Test (CLAST) in order for their students to be eligible for participation in State financial aid programs.

While a single standardized measure of academic achievement does not presently exist at the entry level for all Florida colleges and universities, the CLAST has the potential to serve this purpose at the sophomore level. Satisfactory performance on the test' will be required, beginning in 1984-85, for receipt of an Associate of Arts degree in a public community college and entry into the upper-level (junior and senior year) of the State University System. In order to apply comparable academic standards in all sectors, independent institutions which offer Associate of Arts or Pachelor's degree programs should be invited to participate in this testing program as a condition for continued eligibility for State financial aid. In the event that passage of the test is required for individual student aid applicants, this policy should be applied to students in both public and independent colleges and universities.

Independent Student Status

10. Classification of State aid applicants as independent should generally be limited to those students who are 22 years of age or older.

An aid applicant who declares independent status will typically have a greater financial need than a decendent student due to the absence of any expected parental contribution. Based on the undergraduate students in the study survey sample, Florida has an above-average proportion of independent students (approximately 46%) in the aid applicant pool. This appears to be due in part to the higher median age of the states' general and student populations

rather than to an unusual level of manipulation of the need analysis system. Nevertheless, the establishment of a minimum age for declaring independent status without detailed evidence represents a means for ensuring that State aid is distributed to those with the greatest need. Students below the age of 22 who submit reasonable proof of their independent status through tax returns and other documentation should continue to be classified accordingly.

Graduate Students

11. While priority for State aid funds should continue to be placed on serving undergraduate students, options for providing additional support for graduate students should be considered.

The Advisory Committee and study consultants were in general agreement that priority for use of student aid funds should be placed at the undergraduate level. It was noted, however, that while a high percentage (98.8%) of the graduate students in the study survey attended the institution of their choice, their level of borrowing approached 50% of their total educational costs.

There are several existing and proposed mechanisms which could be of assistance in relieving the heavy debt burden which graduate students are incurring. For example, Legislatively-appropriated out-of-state fee waivers offered by the State universities could be focused to a greater extent at the graduate level. In 1982-83 approximately \$2.2 million or 60% of the \$3.8 million allocation for these waivers is to be used at the graduate level. The allocation formula could be adjusted systemwide or individually in accordance with each institution's priorities.

State Board of Education contracts with several independent institutions are now providing substantial tuition reduction for

graduate students in Social Work and Engineering. This approach could be expanded to include other programs at the graduate level.

Later in this report, the establishment of a Loan Forgiveness Fund is suggested as an incentive for increasing the number of Math and Science teachers in Florida. This concept could be extended to include graduate students training in areas of critical need who subsequently obtain employment in the State.

Part-Time Students

12. Need-h sed State aid programs should continue to be limited to hell-time students. Financial assistance for part-time students should be provided through Federal, institutional and other resources.

returning participating increasing number ofnew and full-time basis than a postsecondary education on less Between 1974 and 1981 the number of part-time students recognized. in both the independent and public sectors has doubled growth of full-time headcount enrollment has been much more limited. It has been assumed in the past that, part-time students would demonstrate limited financial need due to higher employment income spouse's income) not generally and other resources (such as а available to full-time students. However, the extent of financial need among part-time students has not been documented in Florida. the Federal level, relatively few part-time (enrolled at least half-time) students receive Pell grants or other forms of aid. student survey administered in the current stady, 12.7% of the 1981-82 Pell grant recipients in Florida were identified order to respond to the financial needs of this group of students at the State level consideration was given to earmarking a

specific amount of the need-based grants for this purpose. But this approach could have several negative effects.

Since there presently is not enough money to fund all full-time applicants, earmarking funds for part-time student aid could result in awards going to students in this latter group who demonstrate lower net need than the cut-off point for full-time students.

A second consequence would be an increase in the FSAG applicant pool from 70,000 to over 140,000. Unless the grant program received a substantial increase in funds it is questionable whether the number of part-time students aided would justify the increased administrative expense and application cost for individual students as a result of this policy change.

It is believed that individual student aid officers are in the best position to determine the financial aid needs of part-time students. The following recommendations relating to institutional aid would permit some flexibility for institutions to direct resources to part-time students where appropriate.

Community Colleges

community college should be authorized to levy an additional student fee of up to \$1.00 or more per credit hour or credit hour equivalent, to be used solely for financial aid the maximum to be established pur poses, amount and sub se que ntly mod i fied as required by the State Education.

This proposal is intended to enhance institutional flexibility and responsiveness while maintaining consistent statewide parameters for the use of aid funds. State Poard of Education approval would be required for initial statewide authorization of the fees and any subsequent modifications. The actual fee level at each institution should be determined by the Board of Trustees with the advice of students,

faculty, and administrative staff. Use of these funds should be limited to financial need and recognition of academic merit.

least half of the funds collected through this aid fee at each school should support need-based student assistance in keeping with the statutory priority placed on this use of financial aid. minimum of 15% of the fees collected should be available recognizing students with high academic ability. No more than 10% of these funds should be directed to the administrative support of aid program. Criteria for the use of these funds should be should be determined consistent statewide. Demonstrated need Federal guidelines. accordance with current State and achievement awards should require a minimum grade point average of initial receipt and renewal. Satisfactory academic progress should be a condition for continued eligibility for 'need-Both full- and part-time students should be allowed to receive support from this source based upon individual student needs and institutional priorities.

In order to focus on the primary missions of the community college system - college parallel and vocational instruction - students enrolled in Developmental and Citizenship courses should not be charged the fee and should not be eligible for support from these funds. Financial awards for purposes other than financial need and academic achievement should be funded through a specific state appropriation or from other resources available at the institutional level such as race track funds or private donations.

Proceeds from the fees may be used to comply with Federal maintenance of efforts requirements, serve as matching dollars to attract other aid resources, and enhance equal educational

opportunity. Each college should maintain accurate records on the expenditure of the funds collected and submit annual reports to the Division of Community Colleges. Based on current FTE projections, approximately \$5 million would be available in 1983-84 systemwide if each school collected the maximum aid .fee authorized under this recommendation.

State University System

14. Consideration should be given to the consolidation and increase of the two student fees - General Student Aid and Student Financial Aid - currently being assessed in the universities and application of the same statewide criteria for use of these fees as suggested for the proposed community college fee.

-Collectively, the General Student Aid and Student Financial Aid fees currently amount to \$1.06 per credit hour (\$.62 and respectively). In 1981-82, they generated approximately \$4 million for student aid purposes. According to a recent consultants' report Student Services prepared for the Board of Regents, specific information on how these fees are being used is sometimes difficult The General Student Aid Fee (\$2.4 million in 1981-82) obtain. remains at the institution where collected and can be used aid. Proceeds from the purpose related to financial Financial Aid Fee (\$1.6 million in 1981-82) are to be used for needand minority-based aid and are reallocated among the nine universities based on a family income survey originally conducted in This redistribution results in a few institutions receiving 1973. several times the amount initially collected in fees while other universities receive proportionately less. In order to improve the coordination of/these resources with other forms of aid maintaining /institutional flexibility, it is proposed that all fees

remain at the institution where collected; that the two fees be into one and set within a range recommended by the consolidated Board of Regents; that each institution determine the actual fee from students. faculty. input charged based on administrators; and that the same statewide criteria suggested, for community college fee be adopted - at least half of the runds awarded based on need, a minimum of 15% for academic achievers, and than 10% for financial aid administrative expenses. submit university should maintain accurate records and reports to the Board of Regents on the expenditure of these funds including the number of students served at each potential offsets for those institutions which would face reduced phase-out two-vear funding under this proposal are: present fee reallocation process; a possible increase in the maximum level for the consolidated student aid fee since the two have not been changed in over six years; and the impact of the recommended FSAG and Voucher program modifications which would assist low-income students in the public sector. The benefits in terms of a clearer picture of the use of these funds and State aid programs appear to outweigh the coordination with relatively small funding shifts involved. In addition student aid fees, the use of the Legislatively appropriated out-ofstate fee waivers for both graduate and undergraduate should continue to be monitored to assure that they complement available State aid resources.

Vocational Education

^{15.} The Division of Vocational Education should cooperate with FSFAC and other appropriate entities in the development of an in-service training program to increase the participation of

district operated vocational-technical centers in Federal aid programs for which they are eligible.

16. By 1984-85, institutions in the public vocational sector should be included in need-based state grants if they are eligible to participate in the Pell Grant or Guaranteed Student Loan (GSL) Programs, and if they are complying with all applicable laws and rules including the charging of fees within the range established by the State Board of Education.

The study consultants have suggested that consideration be given to the inclusion of this sector in State aid programs in keeping statutory policy goal of providing aid at all levels of post high school education. Nationally, over 30 states extend aid to the public and private vocational sectors. At present, these institutions in Florida vary widely in their participation in Federal aid programs. In order to most effective use of limited State aid resources, institutional eligibility to participate in either the Pell or GSL Programs should be a necessary precondition to receipt of FSAG or other State dollars. At the same time, the Department of Education through the Division of Vocational Education and FSFAC should play active role in assisting vocational centers to develop the necessary staffing and administrative procedures required to .permit effective pasticipation in both State and Federal aid programs by 1984-85. A budget request covering the cost of extending State aid to students in this sector should be developed by the Department for consideration by the 1984 Legislature. 'Grant eligibility should' be limited to individuals enrolled in certificate or degree programs consisting of at least 900 clock hours of classroom instruction. State aid should not be diverted to the vocational centers at the expense of students currently eligible for State grants If sufficient need is demonstrated, a local collegiate sectors. option student aid fee similar to that proposed for the community

colleges and universities should be considered by the State Board of Education in 1984.

In 1981 the State Board of Education adopted a uniform student fee policy for postsecondary level vocational courses offered by school districts and community colleges. The purpose for this action was to require postsecondary students to pay a reasonable portion of the cost of their vocational instruction in either system. In order to make the most effective use of available funds, vocational-technical centers which have not adopted fee schedules within the range established by the State Board or which provide fee waivers to all students regardless of need should not be eligible to participate in State student aid grant programs.

Independent Business and Trade Schools

17. By 1984-85, licensed, accredited independent business and trade schools should be included in the Florida Student Assistance Grant Program if they are eligible to participate in the Pell Grant or Guaranteed Student Loan Programs.

Previous studies as well as the current consultants' report have recommended that consideration be given to inclusion of this sector FSAG program. with the public vocational As aid programs varies wideLy among the participation in Federal independent, business and trade schools. A number of these schools specialize in one field or offer courses of study lasting a few weeks or months and consequently are not eligible for Pell Grants and other Federal aid. It is suggested that, at the outset, State grant eligibility be limited to those institutions which are participating in the Pell or GSL Programs. State licensure a / member of the Council on Postsecondary -accreditation Accreditation (COPA) should be required for inclusion in the

aid program in order to provide some assurance as to the quality standards of the programs offered. As with the public vocational sector, grant eligibility should be limited to students enrolled in a certificate or degree program consisting of at least 900 clock hours of classroom instruction.

Consideration of this option in the past has been hindered by an absence of statistical information on the students and institutions in this sector. Information on schools licensed by the State Board Independent Postsecondary Vocational, Technical, Trade · and Business Schools (SBIPVTTBS) indicates that an estimated 24 schools with a total enrollment of approximately 8,000 would be eligible to participate under the proposed criteria. One approach to identifying the number of potential applicants in this sector would be to add a specific amount to the FSAG program initially earmarked for this. purpose. A second method would be collection of the student information by SBIPVTTBS for consideration by the 1984 Legislature. Eligibility should not bе extended institutions at the expense, of students currently receiving State grants in the collegiate sectors. A decision on whether to these schools eligible for tuition vouchers, if retained as a separate program, should be deferred until the Postsecondary Education Planning Commission completes its study of the proprietary sector in the summer of 1983.

Aid to Meet Critical Labor Market Needs

^{18.} The Teacher Scholarship Program currently included in the 1983-85 budget request of the Department of Education should receive full consideration and support. In addition, the State should establish a Loan Forgiveness Fund for Florida students trained in fields where serious personnel shortages exist such as Math and Science Education, who obtain in-state employment in these areas of specialization.

The Department's 1983-85 budget request includes \$800,000 for the creation of a Teacher Scholarship Program. The program would provide annual scholarship loans of \$4,000 to students with high academic ability who enroll in teacher preparation programs. The scholarship/loans would either be repaid by a year of full-time teaching in a Florida public school for each \$4,000 received or repaid in cash with interest charges added. This proposal will enhance the quality of students enrolled in Florida colleges of education and increase the pool of trained personnel available to teach in the State's public schools.

As a supplement to this approach the creation of a Loan Forgiveness Program is suggested to directly address the current shortage of math and science teachers in the public schools. this approach, students trained as math and science teachers - who obtain employment in Florida would be eligible to have a portion of any student loans obtained in the course of their preparation repaid by the State. Principal payments of up to \$2,500 per year for up to four years would be made by the State to holder of the loan on behalf of the student employee. source of the original loan would vary, e.g. FGSL, PLUS, NDSL, standard consumer bank loan. This wide, range of alternatives would assure access to this program for students at all income levels. The program could be, confined to students graduating from Florida public and independent institutions or extended to graduates of outof-state institutions as well. The concept of the Loan Forgiveness Fund could be expanded to address other undergraduate and graduate addition to Math and Science Education needs training in

specifically identified by the State Board of Education and the Legislature.

It is recommended that the initial State appropriation for the Loan Forgiveness Fund be \$125,000 the first year and \$250,000 during the following year of the 1983-85 biennium. This would support 50 teachers initially and 100 the second year. This proposal will permit the State to address immediate personnel shortages by directing aid to those students who actually obtain work in Florida. The program would avoid the administrative burden and expense of collecting repayments from loan recipients who do not complete their studies or do not seek employment in the designated field.

Student Loans

19. Standby authority should be established for the issuance of Student Loan Revenue Bonds to permit Florida to serve as a secondary market or direct lender in the event that a significant limitation on availability of low interest student loans occurs either in general or for specific types of students such as those pursuing graduate or vocational studies.

1981-82, FGSL loan volume exceeded \$160 million, a 13% increase from the previous year. This/growth was in contrast to a 22% decline in the program nationally during this period. While eligibility for FGSL is technically extended to all persons enrolled approved postsecondary educational in least half-time at institutions, in practice loan distribution varies considerably according to the type of student and institution involved. major cause for these differences is the size of the debt incurred by the student. Currently, lenders estimate that an average balance of at least \$3,000 is needed to achieve a profit on a loan. of this condition, undergraduate students enrolled traditional educational programs (four-year baccalaureate degree-

granting colleges and universities), have relatively unrestricted access to GSL funds because their level of borrowing will generally exceed the necessary minimum. Students enrolled in short-term programs (e.g. vocational) and students with one year or less remaining in their programs (seniors, graduate, and professional students) do not always have access to these loans since their financial requirements, particularly in the case of vocational students, are less than the minimum balance required by most lenders.

Due to these conditions it is suggested that standby authority be established for the issuance of Student Loan Revenue Bonds for two purposes. Through the Student Financial Assistance Commission, the Department of Education could operate a Secondary Market for lenders making small balance loans, or it could serve as a direct lender for students unable to obtain loans elsewhere. By obtaining capital at tax exempt rates, the State should be in financial position to accept smaller balances than commercial profit-based institutions.

The exercise of this authority would be contingent on several factors. Due to changes made to the GSL program in 1981, and the ability to merge the loan and grant applicant files, some income information is now available for many GSL recipients. A comparative analysis of the number and volume of loans guaranteed annually and the income and enrollment patterns of a sample of the recipients would provide an indication of the extent to which increased loan access is required.

A second consideration would be the impact of the Federal PLUS loan program, a supplementary source of funds for parents, graduate students and independent undergraduates which is scheduled to begin operation in Florida in January, 1983. Loans must begin to be

repaid six months after the loan has been made. The interest rate for PLUS loans is presently set at 12%, which is still favorable compared to the rates on consumer loans, but still can pose a hardship due to the payback requirement. States such as Massachusetts and New Jersey have demonstrated the viability of this alternative program through vigorous promotion and communication with private lenders.

Third, individual lender restrictions or policy changes at the Federal level such as the loss of GSL eligibility for graduate and professional students would have to be taken into account if enacted.

Finally, several of the recommendations in this study relating to vocational, and graduate students, if implemented, will have effects on access which should be evaluated prior to the State's reentry into the Student Loan Pond arena.

While specific authorization for the sale of such bonds would be required by the Legislature and Cabinet, enactment of the appropriate statutory provisions in advance would enable the State to expedite implementation if the need arose.

This contingency loan authority should be considered as an alternative to the current law enacted by the 1982 Legislature which permits the creation of individual county loan authorities. It is believed that a centralized approach would provide for a more consistent and equitable distribution of student loan assistance.

In conjunction with this authority, the State should continue in its efforts to encourage lender and student participation in the existing Federal loan programs - PLUS and GSL.

Program Management

financial aid programs by a central State agency, the Legislature and the Department of Education should take the necessary steps to implement the recommendations contained in the 1982 Performance Audit of the Florida Student Financial Assistance Commission conducted by the Auditor General.

The 1982 Legislature requested that a Performance Audit be conducted for the purpose of reviewing the efficiency and effectiveness of the internal operations and management practices of the Florida Student Financial Assistance Commission (FSFAC). The audit, conducted during the summer of 1982 included the following major recommendations:

- 1. FSFAC should be abolished and its administrative duties assigned to the Department of Education.
- 2. The Florida Student Financial Aid Advisory Council should be abolished and a new advisory body created composed of representatives from private and public postsecondary educational institutions, professional student financial aid administrators, students, financial institutions, and the general public.
- 3. The Department should develop long-range plans for the Guaranteed Student Loan Program in order to estimate the resources needed to manage workload increases and ensure that the State's loan default rate remains within Federal limits. The plan should be reviewed at least annually.
- 4. The Department should develop formal written procedures and controls for its internal administration of student financial aid programs.

5. The Department should periodically evaluate its student financial aid activities to determine if they are efficient and contribute to program goals.

The Commission, Advisory Council, and Commissioner of Education have accepted the audit findings and have begun to initiate the actions hecessary to carry out the recommendations listed above.

21. The Department of Education should annually review and validate a random sample of State grant award recipient records to determine the accuracy of the eligibility information provided.

1979 report by the U.S. Comptroller General, Inconsistencies in Awarding Financial Aid to Students Under Four Federal Programs, fraudulent reporting by students and wide cited erroneous and variation in the documentation of eligibility. In order to ensure best use of available State aid funds the Department of Education should develop award validation procedures in cooperation with representatives from each sector for implementation beginning in 1984-85. This monitoring process should include no more than a sample of the State grant recipients each year. A number of campus aid administrators are now requesting submission of income forms and other documentation to verify student need analysis data for Federal and institutional 🎘 rposes.' This information could also be used in the State review. Since the documentation would be examined after an award had been made this procedure should not result in any delay in the initial distribution of funds.

22. Consideration should be given to the more complete use of available Federal revenues for the enhancement of the administration of the Florida Guaranteed Student Loan Program.

previous fiscal years, Florida has not completely used the Administrative Cost Allowances provided by guaranty agencies by the For example, in 1981-82 FSFAC issued loan Federal government. issuance commitments in excess of \$160 million. The Administrative Cost Allowance, representing 1% of the volume of loans guaranteed would have generated approximately \$1.6 million. This allowance in the form of reimbursement for actual expenditures. the Florida Legislature authorized \$700,000 in expenditures for administration of the program in 1981-82, a balance of \$900,000 in potential revenue from the Administrative Cost Allowance was not be noted that these funds may only be applied to It should used. administrative costs of the FGSL. Activities related to ąll aid programs must be supported from administered It is recommended that a specific plan for improvements in the administration of the FGSE program be prepared by the Department for consideration by the Legislature that would more fully utilize available Federal funds. Emphasis in the plan should be placed on lender collection assistance, default collections, monitoring rates, and data processing default institutional individual personnel To avoid long-term loan servicing. capability for the event of a reduction in this source of Rederal liabilities in funds, all additional staffing requested in the plan should be on temporary, or time-limited contract basis.

Student Financial Aid Data Base

The Department of Education should institute the necessary steps to develop and periodically update an inventory of all sources of financial aid received by postsecondary students in Florida.

It is clear that additional responsibility for financial assistance is going to be placed on the State. In order to assess the effectiveness of existing programs and determine the need for adjustments in the level of resources provided, some basic information on both the sources and recipients of financial aid will continue to be required. This data collection should be implemented with the advice and direction of aid administrators and other institutional representatives to identify the appropriate data elements and collection procedures. In order to avoid an unreasonable additional reporting burden, existing sources of information such as the Federal FISAPP/FISCOP reports should be used as much as possible.

The aid inventory should be comprehensive both in terms of the resources documented (e.g. Federal and State aid, OPS, cooperative education, employer-sponsored instruction) as well as the institutions covered. In addition to institutional information, individual student data should periodically be analyzed on a sample basis to determine the impact of current and proposed policies on financial aid applicants and recipients. The FSAG applicant file maintained by the Department contains detailed information on over 70,000 students and represents an excellent foundation for any future research efforts.

In order to encourage the full participation of all sectors in this process, completion of the institutional inventory should be a requirement for State aid eligibility. This approach should not only clarify the financial aid picture at the State level but will also provide an incentive for increased coordination of aid resources at the institutional level.

Student Financial Aid Statutory Revision

24. Consideration of Student Financial Aid issues by the 1983 Florida Legislature should include a thorough review and revision of the Florida Statutes (Chapter 240, Part IV) on Scholarship and Financial Aid.

In addition to the general state policy for student financial aid and the organizational changes recommended in the performance audit, the Legislature should address any other modifications in this section of the Statutes which would contribute to a clearer understanding and functioning of the State financial aid system. At present, Chapter 240 contains references to aid programs no longer funded, student fees no longer collected and a number of other provisions that should be updated or deleted.

STUDENT FINANCIAL AID STUDY

PRINCIPAL CONSULTANTS

WILLIAM CLOHAN

Currently a partner in the Washington law firm of Laessig, Brown, Hearn, and Clohan and General Counsel for the National Association of Private Schools. positions have included United States Undersecretary of Education and U.S. Congressional staff officer on matters relating to higher education and student aid.

JERRY S. DAVIS

- Presently serves as the Director of Research and Policy Analysis for the Pennsylvania Higher Education Assistance Agency. Responsible for coordinating and publishing the Annual Survey of the National Association of State Scholarship and Grant Programs. Dr. Davis has also directed major research projects for the California Student Financial Aid Commission, conducted research for the College Entrance Examination Board, and provided consultant services on student aid to more than a dozen states.

SAMUEL M. KIPP, III - Serves as a Policy Specialist with the California Postsecondary Education Commission and as the Project Director for the Student Charges and Student Financial Aid Simulation Models, which are used by the Legislature, Commission, and Department of Finance for planning and budgeting purposes. Currently designing a computer model for use by Florida in anticipating and analyzing the potential impact of policy changes at the state and federal levels relating to student aid.

SIMULATIONS OF FSAG AND VOUCHER RECOMMENDATIONS

BACKGROUND INFORMATION AND INITIAL OBSERVATIONS

This brief appendix contains a description of the data files used to produce these simulations of FSAG Option 3 and FTV Option 2, a description of the assumptions underlying these particular simulations, and some initial observations about what the numbers in the four tables appear to show. These simulations serve as useful general indications of the implications of adopting particular options, but they should be regarded as preliminary estimates not definitive indications of what will occur if a particular option is adopted. More definitive information will be available to state policy makers when the final simulation model is completed next month and the simulations are run against the more current 1982-83 applicant files.

Data File Information

The simulations contained in this appendix are based on a 20 percent sample of applicants drawn from the merged master file of applicants for Florida's financial aid programs in 1981-82. The original merged file contained data on over 116,000 applicants to the FSAG, FTV, FAS, and FGSL programs in 1981-82.

From this original merged applicant file, applicants from out of state, those who applied only for FGSL loans, graduate students applicants, and Florida residents who planned to attend an out of state institution were excluded from the subsequent sample file. The needed data elements from the original file were then retained in the new sample file. A 20 percent sample was taken containing information on 12,795 applicants for grant aid from one or more of Florida's grant programs.

Initial Observations on These Simulations

The tables in this appendix illustrate the potential impact of adopting two different options outlined in the consultants' report. These simulations differ from those provided earlier because they assume that current recipients who attempt to renew their grant or voucher will be able to do so even if they do not meet the requirements under the new distribution or eligibility mechanisms. New recipients each year of the four-year phase in would have grants and/or vouchers awarded on the basis of the new program criteria. Two different sets of assumptions about program funding levels are shown for each option. Table 1 shows the potential impact of adopting FSAG Option 3 which distributes new awards on the basis of students total resources (their total family contribution plus any Pell Grant award), permits current recipients who demonstrate need to renew their awards, and maintains the present level of overall program

funding. Table 2 allocates new awards on the same basis and treats renewal recipients in a similar manner, but assumes that program funding will increase by 10 percent per year over the next four years. Table 3 illustrates for current and prospective recipients in the 20 percent sample file, rather than the entire universe of recipients, the potential impact of changing the tuition voucher to a need-based program, permitting existing voucher recipients (whether they can demonstrate need or not) to renew their awards, making new voucher awards of \$500 to \$1,000 to applicants who can demonstrate at least \$500 of net need, permitting applicants from independent institutions whose students are eligible for FSAG grants to participate in the voucher program as well, and maintaining the general level of support that is presently provided. Table 4 contains the same general provisions but also increases the size of the maximum voucher by 5 percent in each of the next four years.

FSAG--Option 3--Constant Funding(Table 1)

- 1. This-table illustrates the potential impact of using total family resources (total family contribution plus Pell Grant amount) as the basis for distributing new FSAG awards, holds current recipients who continue to demonstrate need harmless when they renew, and maintains present funding levels for the program over the next four years.
- 2. This distribution mechanism produces a dramatic increase in the number of dependent low- and middle-income recipients, primarily among those attending community colleges or state university campuses.
- 3. Because of differences in the income levels of applicants and varying tuition charges among the sectors, this particular option produces a sharp reduction in the number of recipients in the independent sector. The provision that current recipients who continue to demonstrate need be permitted to renew their present grants, softens the initial impact of the change on these institutions for several years and holds current recipients harmless, but over four years the total number of FSAG recipients at ICUF institutions will diminish.
- 4. Overall, this option provides grants to those students with the fewest financial resources. Because more of these students attend lower priced public colleges and universities than attend independent institutions, the size of the average grant will drop each year and the number of recipients increase significantly.

FSAG tion 3--Increased Funding(Table 2)

- 1. This table illustrates the potential impact of using total family resources as the basis for distributing new FSAG awards, holds current recipients who continue to demonstrate need harmless when they renew, and increases total program funding by 10 percent per year over the next four years.
- This distribution mechanism produces a dramatic increase in the number of dependent low- and middle-income recipients, primarily among those attending community colleges or state university campuses.
- 3. Because of differences in the income levels of applicants and varying tuition charges among the sectors, this particular option produces a significant reduction in the number of recipients in the independent sector. The provision that current recipients who continue to demonstrate need be permitted to renew their present grants softens the initial impact of the change on these institutions for several years and holds current recipients harmless. The increased level of program funding each year of the phase in further softens the adverse impact on independent institutions, but they nonetheless would have fewer FSAG recipients over the next four years.
- 4. Overall; this option provides grants to those students with the fewest financial resources. Because more of these students attend lower prized public colleges and universities than attend independent institutions, the size of the average grant will drop each year and the number of recipients increase substantially. Increased program funding reinforces this result appreciably and the net effect is a 67 percent increase in the total number of FSAG recipients.

FTV--Option 2--\$500-\$1,000 Awards(Table 3)

- 1. This table illustrates the potential impact of changing the tuition voucher program to a need-based program, distributing new awards on the basis of net need(\$500 minimum required to receive a voucher), permitting current recipients who cannot demonstrate need to renew their awards, and allowing all needy applicants at independent institutions whose students can participate in the FSAG program to receive vouchers.
- There would be an intial year increase in the total number of voucher recipients because of the inclusion of students with demonstrated need at other independent institutions, but over the next four years the total number of voucher recipients

would drop significantly, at least at ICUF institutions.

- 3. Program funding requirements would increase perceptably overcurrent levels for the first several years because of the extension of eligibility to students with demonstrated need at other
 independent institutions. If policy makers want to avoid this
 increase in funding requirements, they may want to consider
 phasing in eligibility for students at these schools in much
 the same way as the original voucher eligibility at ICUF institutions was phased in over four years.
- 4. The implementation of a need-based, need-sensitive voucher program is likely to increase program effectiveness by providing funds to those students for who the money will make a difference in their attendance patterns. In this regard, some of the current voucher recipients who do not apply for other need-based aid may, in fact, be able to demonstrate need under the new program requirements. Because of the high school costs at such institutions and regular annual increases in tuition, it would not be surprising if 5,10, or a greater percentage of those shown as "non-needy" could demonstrate need if required to do so. If that assumption is correct, then the projected drop in voucher recipients at ICUF institutions would not be as great as shown in Table 3.

FTV--Option 2--Increased Maximum Award(Table 4)

1. The only difference between the results in Table 3 and this table would be in the size of the average award, total dollars in each, sector, and the total cost of funding the need-based voucher program. The reason for this is that most of the current voucher recipients with demonstrated financial need will be able to demonstrate sufficient need each year to receive a maximum grant. Despite this, total program costs would only be eight percent higher in the fourth year than they are at present and at no time during the four years would the total voucher dollars flowing to students at independent institutions be lower than it is at present.

^{*}Both number of voucher recipients and total dollars are based on figures from 20 percent sample file of 1981-82 Florida grant, voucher, and loan applicants. Current voucher recipients who cannot demonstrate financial need are permitted to renew their vouchers under terms of the present non-need-based program, but new awards are made on the basis of demonstrated need.

^{**}Actual totals would be approximately 5 times the number of awards and dollars indicated.
